EXPERIENCE

HubSpot Cambridge, MA

Technical Lead I *Apr 2026 – Oct 2026*

- Led a 3-person frontend team for HubSpot's developer platform, setting the roadmap and partnering with backend, security, and product to help customers and third-party developers build, secure, release, and install apps on HubSpot
- Owned the React/TypeScript app install flow UI (19k installs/day): enabled OAuth PKCE and sensitive-scope filtering for AI connectors (Claude, ChatGPT, custom MCP) and shipped optional-scope selection to all apps so users can choose which permissions to grant
- Built the UI for versioned app releases, letting developers create, install, review, and release app versions; defined the API contract with 3 backend teams
- Developed a migration flow (review, validation, live status polling) for moving developers off of a legacy platform

Senior Software Engineer I *Sep 2023 – Apr 2026*

- Redesigned the developer project workspace (React/TypeScript) to unify app building and distribution across API-token and OAuth apps; serving 24k daily page views
- Authored the API requirements and edge-case analysis (routing, replication lag, install limits, cross-account installs) for a new unified developer platform that became the source of truth for multiple backend teams; shipped on time without production issues
- Diagnosed and fixed availability and latency regressions across 3 developer-app UIs, restoring them to above the 99.25% SLO; documented and shared the work as a company-wide reliability case study
- Fixed XSS and phishing vulnerabilities in customer-facing UIs; added tests and updated the CSP to prevent recurrence
- Created and redesigned a domain-verification flow so developers can prove app ownership

Software Engineer *Jun 2022 – Aug 2023*

- Built the webhooks UI for custom integrations (React/TypeScript), from subscription management to delivery logs, iterating on beta feedback; reached 1,900+ users and 20,000 webhook subscriptions within 6 months

Software Engineering Co-op *Jun 2021 – Dec 2021*

- Developed the React frontend for a setup wizard syncing Salesforce data to custom HubSpot objects, plus a table to validate data mappings

Humana Louisville, KY

Software Engineering Intern *May 2020 – Aug 2020*

- Built a full-stack BigQuery dataset access-request app (Vue, Flask REST API, Firestore), deployed via Azure DevOps CI/CD pipelines

PROJECTS

The Michigan Daily Newspaper Ann Arbor, MI

Managing Online Editor (Lead Engineer) *Aug 2020 – Dec 2021*

- Led the paper's 35-person software team, including data, mobile, UI/UX, and web development subteams; migrated content to AWS (S3, CloudFront, Lambda) and redesigned michigandaily.com (350k monthly users)
- Built a live election-results website and API (React, Python, AWS Lambda/S3) with D3.js maps and charts
- Developed a mobile app for the paper using React Native and Expo

EDUCATION

University of Michigan Ann Arbor, MI

Bachelor of Science in Computer Science, Minor in German *Sep 2018 – Apr 2022*

Awards: Engineering Scholarship of Honor (2018-22), Lipsey Multimedia Reporting Award (2020, 2021)

SKILLS

Languages: TypeScript, JavaScript, HTML/CSS, Python, SQL, C++
Frameworks/Libraries: React, Next.js, Node.js, React Native, Vue, Storybook, D3.js, Supabase/Postgres, Jest, Selenium
Concepts: REST APIs, OAuth 2.0/PKCE, webhooks, CI/CD, observability, accessibility, web security (XSS, CSP)
Tools: Claude Code, Conductor, AWS (S3, Lambda, CloudFront), Vercel, Figma
